### VERY IMPORTANT PREPARATION

To ensure the self-adhesive hook & loop fastener stick to the plastic trim, you **MUST CLEAN** all grime from the plastic and **REMOVE** all the **SILICONE** applied during manufacture and detailing.

To do this please:

1. Use a silicone remover, such as 'Auto-Glym Intensive Tar Remover' and apply generously to the surface you want to adhere to.
2. Using a separate clean & dry cloth, thoroughly dry the surface until the cloth starts to drag. Attach one self-adhesive fastener tab to see if it sticks. (Repeat steps 1 to 2 if necessary) Extra tabs have been provided.
3. Attach the self-adhesive fasteners and let them fully adhere over the next 24 hours for the best bond.

*\*The self-adhesive fasteners cannot be used once it has been in contact with silicone. Replacement kits are available on our website.*

### STEP 3. INSTALLING THE SIDES

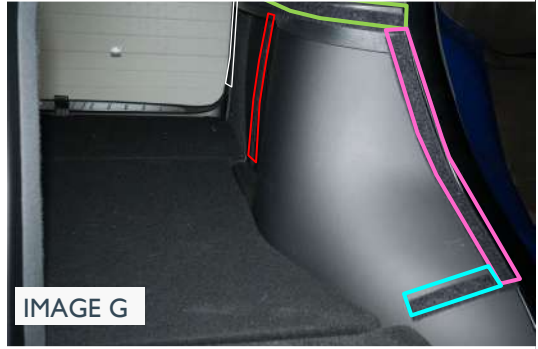

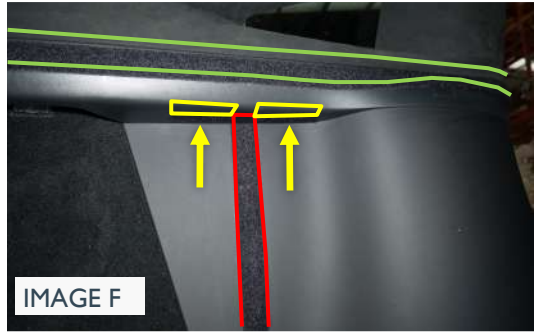

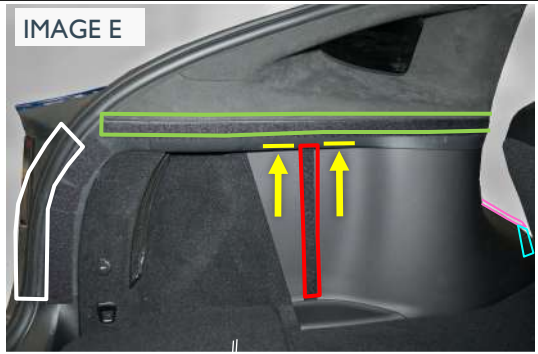

Attach the loop fastener strips to both sides plastic panels as showed on **images E & F** (Near side) following the color code on first page packaging requirements.

Stick the two self-adhesive loop fastener tabs on near side plastic panel (**highlighted in yellow image E & image F**) in line with the hook fastener tabs welded on the reverse side of the Cargo liner near side.

- Snip the self-adhesive fastener strips in the corners to ease around the bend. (**highlighted in white and pink—images E & G**)
- Fasten the hook fastener sewn and welded on the reverse side of the boot liner to the previously attached fasteners. (**image H**)
