VERY IMPORTANT PREPARATION

To ensure the self-adhesive hook & loop fastener stick to the plastic trim, you **MUST CLEAN** all the grime from plastic and **REMOVE** all **SILICONE** applied during manufacture and detailing.

To do this please:

1. Use a silicone remover, such as AutoGlym Intensive Tar Remover and apply generously to the surface you want to adhere to.
2. Using a separate clean & dry cloth, thoroughly dry the surface until the cloth starts to drag. Attach one self-adhesive fastener tab to see if it sticks. (Repeat steps 1 to 2 if necessary) Extra tab of spares have been provided.
3. Attach the self-adhesive fasteners and let them fully adhere over the next 24 hours for the best bond.

**The self-adhesive fasteners cannot be used once they have been in contact with silicone. Replacement kits are available on our website.*
